1 INTRODUCTION

The objective of Destination Earth initiative (DestinE) is to develop a very high precision digital model of the Earth to monitor and simulate natural and human activity, and to develop and test scenarios for more sustainable development and for achieving both the green (Green Deal) and digital (Digital Strategy) priorities of the EU.

DestinE is based on the following elements:

- DestinE Core Service Platform (DESP): A user-friendly platform that provides a large number of users with evidence-based policy and decision-making tools, applications and services, based on an open, flexible, scalable and evolvable secure cloud-based architecture.
- DestinE Data Lake (DEDL): fulfils the storage and access requirements for any data that is offered to DestinE users. It provides users with a seamless access to the datasets, regardless of data type and location. Furthermore, the DEDL supports near-data processing to maximize throughput and service scalability. The data lake is built upon existing data holdings such as Copernicus DIAS, ESA, EUMETSAT and ECMWF.
- The DestinE Digital Twins (DTs): initially, two Digital Twins are provided as part of Destination Earth.
 - DT on Weather-induced and Geophysical Extremes: provides capabilities and services to support decision making for rapid response to meteorological, hydrological and air quality extremes. The system combines weather, hydrology and air-quality observation and cutting-edge simulation capabilities into a unified framework to provide high-quality weather and impact-sector information from global to continental, to country and city scales for the assessment and prediction of environmental extremes on a timescale of a few days ahead. It has a global component, which produces regularly (daily) simulations on a time scale of 4 days ahead with a spatial resolution of about ~4 km. It also has an on-demand regional component, which produces simulations on a timescale of two days ahead with a spatial resolution of 500-750m over Europe and which is configurable (on-demand) for specific triggering and tailoring of the provision of information in terms of geographical region, extreme event type and related impact-sector needs, or what-if scenarios.
 - DT on climate change adaptation: provides capabilities and services to support planning activities and decision-making linked to climate change adaptation. The system combines cutting-edge Earth-system and impact-sector simulations and observations into a unified framework to provide global high-quality climate projections and impact-sector information on multi-decadal timescales (2020 to ~2050), at a very high spatial resolution (~5km). It produces updated climate information both regularly (yearly or less), operationalizing the capacity to

produce global multi-decadal projections, and on-demand allowing to test various scenarios, the impact of unprecedented events, or to explore how certain past extreme events will look in a future climate through a storyline approach.

The DestinE Data Portfolio (DEDP) lists the datasets offered via DestinE to users. Two kind of data are offered:

- DestinE generated data such as from the DTs or promoted DestinE User generated data
- Datasets from federated data holdings

1.1 Scope

The data portfolio identifies and details all data that DestinE users may access.

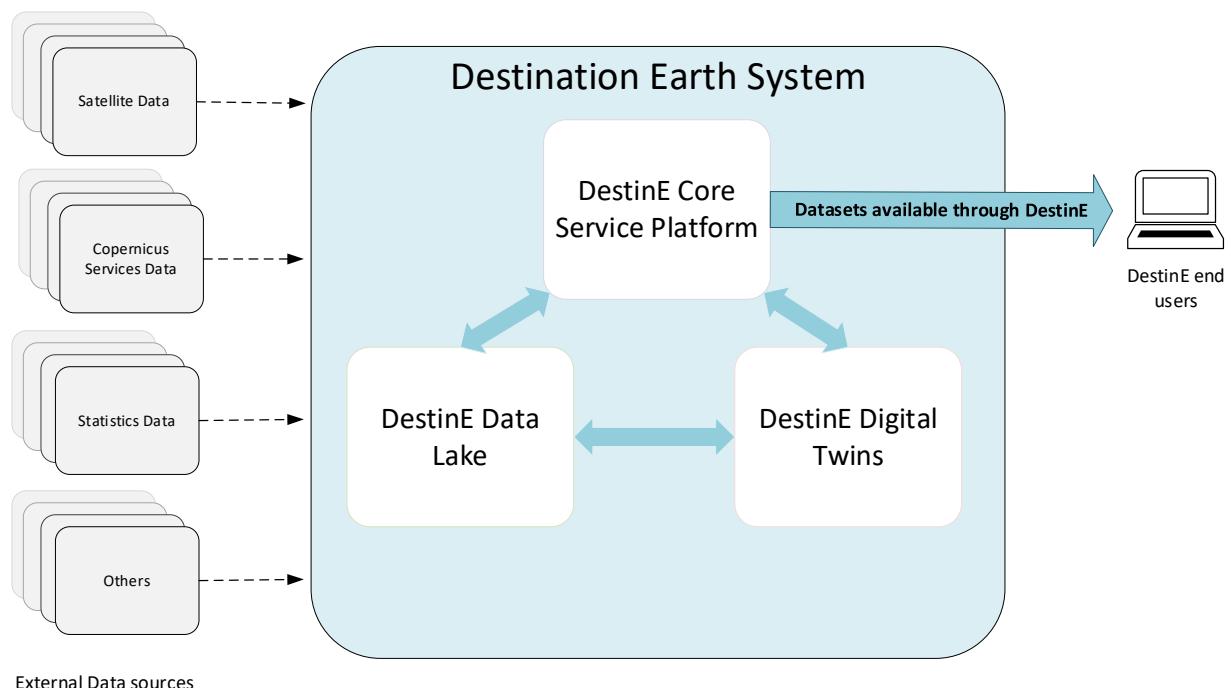

Figure 1: DestinE Data Portfolio access

This document allows to obtain an overview of the data portfolio available for DestinE Users.

All DestinE dataset are classified using the below maturity level.

In development: user level data under development. Limited data sets might be made available upon request for early evaluation purposes. There is no timeliness, quality monitoring and availability level imposed.

Experimental production: user level data routinely/on-demand generated and available upon request. There is no guarantee on availability. Quality is not necessarily monitored and timeliness is not necessarily within the target range.

Pre-operational: routinely/on-demand production of data. Expected timeliness and accuracy are as much in line with expected values as possible and are fully documented. The data retention time may be lower than the retention time for an operational dataset.

Operational: routinely/on-demand production of data. Expected timeliness, quality and availability level met expected values and are fully documented. Quality and timeliness are monitored and reported operationally.

The following table provides an overview of datasets characteristics according to their maturity level:

Maturity Level	Access	Timeliness	Quality Monitoring	Retention Time	Availability
In development	Restricted and temporary - access granted upon request	✗	N/A	N/A	N/A
Experimental	Restricted and temporary - access granted upon request	✗	Not mandatory	Set on-demand	N/A
Pre-operational	Routinely / On-demand production - discoverable	✓	✓	Can be lower than the retention time of OPE dataset	OPE SLA as much as possible
Operational	Routinely / On-demand production - discoverable	✓	✓	Agreed retention time documented in the Data portfolio	OPE SLA

The Data Portfolio document is an evolving document throughout the execution of the DestinE initiative. Also to note, described datasets list is an initial version at this stage. This as consequence means datasets might be added or removed. The target is to extend datasets diversity gradually to reflect the data space landscape as per Figure 2.

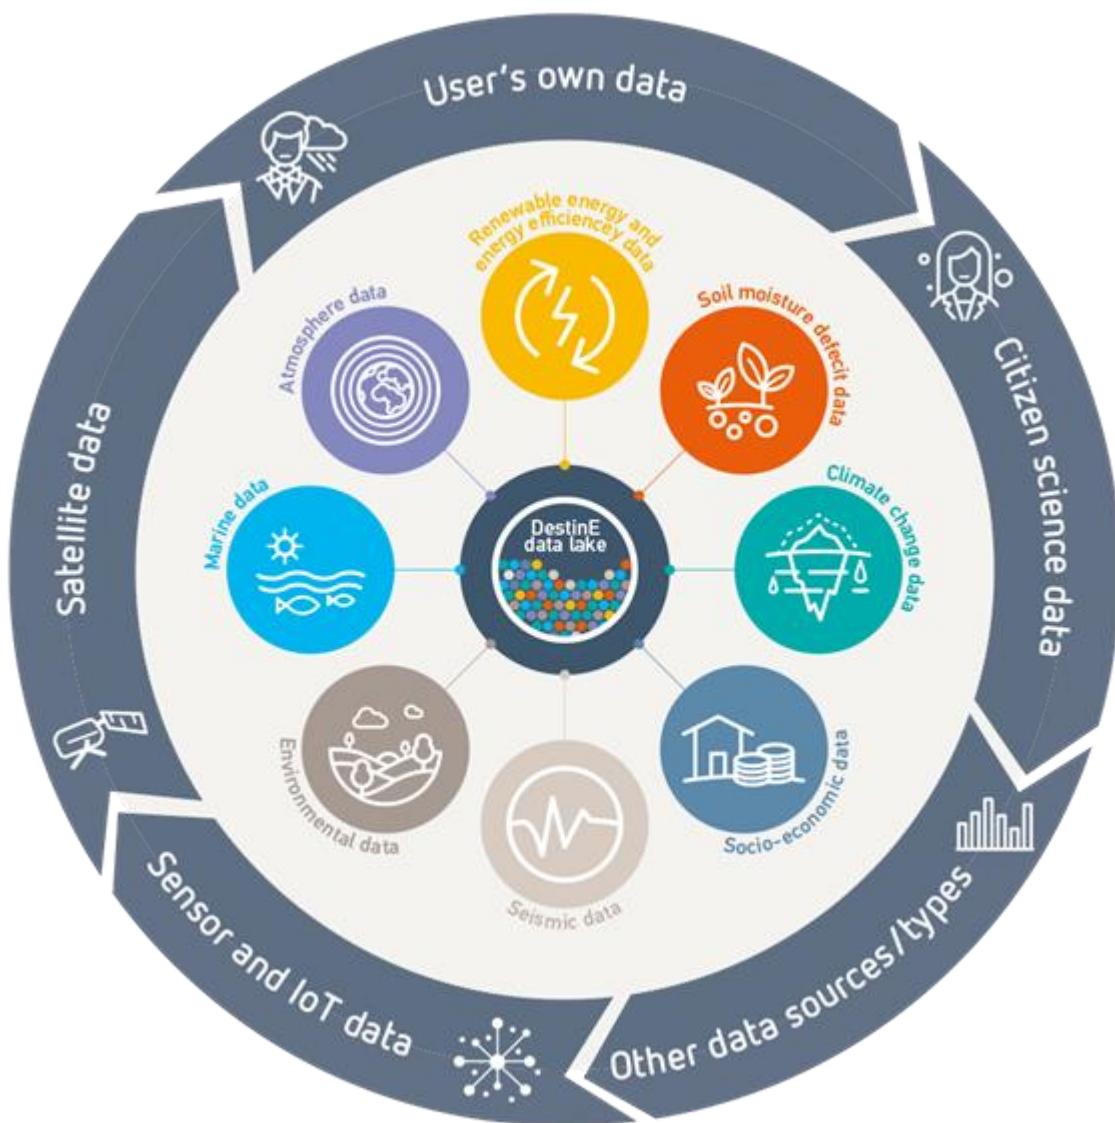

Figure 2: DEDL Data types

1.2 Structure of the document

This document is organized in four main chapters:

Chapter 1 Introduction: it describes the scope and the structure of the document, and lists the Applicable and Reference Documents

Chapter 2 Dataset Governance

Chapter 3 Overview of datasets available through DestinE

Chapter 4 External Data sources description

Chapter 5 DestinE Digital Twins generated datasets detailed description

Chapter 6 List of TBWs, TBDs, TBCs

1.3 Applicable Documents

	Document Title	Reference
AD-1	DestinE – System Framework High Level Description & Architecture	DTE-ADD-001, v1

1.4 Reference Documents

	Document Title	Reference

1.5 Acronyms and Abbreviations

Acronym/Abbr.	Explanation
3E	ECMWF, ESA, EUMETSAT
ADS	Atmosphere Data Service
API	Application Programming Interface
CAMS	Copernicus Atmosphere Monitoring Service
CDS	Climate Data Service
CEMS	Copernicus Emergency Service
CSC	Copernicus Space Component
CLMS	Copernicus land monitoring service
CMEMS	Copernicus Marine Service
C3S	Copernicus Climate Change Service
DestinE	Destination Earth
DE	Destination Earth
DEDL	DestinE Data Lake
DEDP	DestinE Data portfolio
DESP	DestinE Core Service Platform
DIAS	Copernicus Data and Information Access Services
DT	Digital Twin
EC	European Commission
ECMWF	European Centre for Medium-Range Weather Forecasts
EO	Earth Observation
EODC	Earth Observation Data Centre
ESA	European Space Agency
EU	European Union
EUMETSAT	European Organisation for the Exploitation of Meteorological Satellites
EWC	European Weather Cloud (EUMETSAT & ECMWF)
FAIR	Findability, Accessibility, Interoperability, and Reuse of digital assets
GSV	Generic State Vector
GUI	Graphical User Interface
HDA	Harmonised Data Access
HPC	High Performance Computing
IAGOS	In-service Aircraft for a Global Observing System
ISIMIP	The Inter-Sectoral Impact Model Intercomparison Project
REST	Representational State Transfer
SAF	EUMETSAT Satellite Application Facility
SSO	Single Sign On
TBC	To be confirmed
TBD	To Be Defined
TBW	To be written
WEkEO	DIAS Service implemented by EUMETSAT, ECMWF, EEA, and MOI

2 DATASETS GOVERNANCE

Data portfolio reviews

The DestinE Data portfolio will be reviewed regularly by the DestinE Joint Configuration Control Board (JCCB) as defined in [RD-5]. This board is responsible of defining the strategic guidelines.

- Data access policies
- Data retention
- Datasets catalogue

Data portfolio updates' request

The addition or removal of datasets can be requested by users to Destination Earth (via User Portal or via Use Case on-boarding request). DestinE JCCB will analyse the suitability and may accept the change.

Datasets management

- Retention time

The retention time is defined as the duration in time a dataset is stored, accessible, available in the DEDL. The maximum retention time cannot go beyond the duration of each Destination Earth Phase.

DestinE Digital Twins data retention is specified into the respective datasets detailed description in section 5 (see “*Availability Policy*” row).

The retention time of datasets accessed by federation (“*Federation access*” in Table 1) is set and managed by the external data provider and thus this is independent of DEDL data management.

For data kept in the DEDL Fresh Data Pool: either complete dataset or part of the dataset (e.g., “*DEDL Fresh Data Pool (Last 2 years rolling archive)*” in Table 1), retention time is managed as specified in section 3 of each dataset.

- Metadata

Datasets are catalogued using metadata following FAIR Data principles (Findable, Accessible, Interoperable, and Reusable) [RD-4] and is conformant at least STAC specification 1.0.0 [RD-6]. Metadata specifications available in TBD document.

Further information about DestinE Data Governance is available in [RD-5].

3 DATASETS OVERVIEW

The table below lists and provides high level information on datasets available within DestinE:

- DestinE data are DT output and DestinE User Generated Data which are promoted to be available to the entire community.
- External data are federated datasets available via DestinE.

The DE Data Lake maintains a data pool for a subset of data called also “DEDL Fresh Data Pool” built and maintained from federated data sources. This Fresh Data Pool offers immediate access to potentially often used data by DE users to facilitate immediate computation close to the data.

“DE dataset access” column lists from where data from one dataset can accessed by DESP Users.

Below the points of access:

- Federation Access - Access to external datasets via Federation
- DEDL Fresh Data Pool – Access to subset or entire dataset from the DEDL Fresh Data Pool.
- DT Data Warehouse – Access to DTs Data in DT Data Warehouse

DE dataset ID	Dataset description	Dataset provider	DE dataset access

Table 2: Federated Data providers

5 DESTINE DIGITAL TWINS GENERATED DATASETS DETAILED DESCRIPTION

This section describes the DestinE datasets (Routine or On-Demand) generated per Digital Twin.

5.1 Climate Change Adaptation DT

ID	EO.ECMWF.DAT.DT_CLIMATE_ADAPTATION (DEDL Harmonised Data Access service) climate-dt (Polytope service0
Status	Development
Description	Digital Twin Climate Change Adaptation (models: IFS-NEMO, IFS-FESOM, ICON)
Data family	Destination Earth - Climate Adaptation Twin
Documentation	RD-2, RD-6
Availability Policy	Default dataset is the latest scenario. Scenario data to be kept throughout Phase 1 and phase 2 unless other scenarios are made available, and subject to quality control decisions and storage requirements as production begins
Data access	DESP web site API
Geographical area	Global
Geometry	HEALPix
Vertical coordinate	Pressure levels
Vertical coverage	From surface to 1 hPa
Model configuration	activity ScenarioMIP experiment SSP3-7.0 simulated at 5km activity CMIP6 experiment historical simulated at 10km activity story-nudging experiment control, historical, Tplus2.0K
Output resolution	For each simulation, outputs are available multiple grids: resolution high 6.7 km, HEALPIX 1024* resolution standard 50 km, HEALPIX 128

	*12 km, HEALPIX 512 for simulations at 10 km (historical, storylines)	
Time coverage	1990-2020 historical, 2020-2040 scenario (only selected periods will be available initially)	
Time resolution	Hourly atmospheric model fields Daily mean ocean fields	
Update frequency	Daily (when DTs run, this is the synchronization frequency between the HPC FDB and the data bridge FDB)	
Dissemination	DESP web server	
Data format	GRIB2, ccsds_packing	
Size	estimating 10PiB - 36PiB	
Initial variables	Name	Variable Type
Instantaneous encodings		
Hourly	2 metre temperature Total cloud cover 10 metre U wind component 10 metre V wind component 2 metre dewpoint temperature Skin temperature Total column cloud ice water Total column cloud liquid water Surface pressure Total column vertically-integrated water vapour Snow depth Charnock Mean sea level pressure Boundary layer height Low cloud cover Medium cloud cover High cloud cover Total precipitation rate	Single and Surface fields (Atmosphere)
Hourly	Geopotential Specific Humidity Relative Humidity Temperature U component of wind V component of wind Potential vorticity	Pressure levels 19 pressure levels: (1000, 925, 850, 700, 600, 500, 400, 300, 250, 200, 150, 100, 70, 50, 30, 20, 10, 5, 1)

	Vertical velocity Specific cloud liquid water content	
Hourly	Snow depth water equivalent	Model levels (Sea-ice/snow/soil) 5 model levels: (1, 2, 3, 4, 5)
Hourly	100 metre U wind component 100 metre V wind component	Height levels 100m
Mean encodings		
Daily	Time-mean sea ice thickness Time-mean sea ice area fraction Time-mean eastward sea ice velocity Time-mean northward sea ice velocity Time-mean X-component of sea ice velocity Time-mean Y-component of sea ice velocity Time-mean sea ice volume per unit area Time-mean snow volume over sea ice per unit area	Single and Surface fields (Sea Ice)
Daily	Time-mean sea surface temperature Time-mean sea surface height Time-mean sea surface practical salinity Time-mean vertically-integrated heat content in the upper 300 m Time-mean vertically-integrated heat content in the upper 700 m Time-mean ocean mixed layer depth defined by sigma theta 0.03 kg m-3	Single and Surface fields (Ocean)
Daily	Time-mean northward sea water velocity Time-mean eastward sea water velocity Time-mean sea water potential temperature Time-mean sea water practical salinity Time-mean upward sea water velocity	Model Levels (Ocean, model dependent, Lev=75 (NEMO), Lev=70 (Fesom), Lev=64 (ICON) , available (1 to Lev))
Accumulated encodings		
Hourly	Total precipitation Snowfall Surface sensible heat flux Surface latent heat flux Surface short-wave (solar) radiation downwards Surface net long-wave (thermal) radiation Surface net short-wave (solar) radiation TOA incident short-wave (solar) radiation Surface long-wave (thermal) radiation downwards Top net long-wave (thermal) radiation Top net short-wave (solar) radiation	Single and Surface fields (Atmosphere)

	Evaporation Surface runoff Sub-surface runoff Time-integrated eastward turbulent surface stress Time-integrated northward turbulent surface stress Time-integrated eastward turbulent surface stress due to surface roughness Time-integrated northward turbulent surface stress due to surface roughness	
--	---	--

5.2 Weather-induced and Geophysical Extremes DT

ID	EO.ECMWF.DAT.DT_EXTREMES (DEDL Harmonised Data Access service) extremes-dt (Polytope service)
Status	Development
Description	Digital Twin forecast for Weather-induced and Geophysical Extremes
Data family	Destination Earth - Weather-induced and Geophysical Extremes Digital Twin
Documentation	RD-2, RD-7
Availability policy	Daily global forecast data. The most recent 15 days of forecasts are made available subject to HPC and storage constraints
Data access	DESP website API
Geographical area	Global
Geometry	Globally gridded data, formatting is the octahedral Gaussian grid O2560
Vertical coordinate	Pressure levels
Vertical coverage	From surface to 1 hPa
Horizontal resolution	Approx. 4.4 km
Time coverage	4 days
Time resolution	Hourly atmospheric model and wave model fields Six hourly mean for total lightning flash density
Update frequency	Daily

Dissemination	DESP web server	
Data format	GRIB2, ccstds_packing	
Size	215 TiB – 655 TiB TBD	
Initial variables	Name	Variable Type
Instantaneous encodings		
Hourly	10 metre U wind component 10 metre V wind component 2 metre temperature Mean sea level pressure Surface pressure Total column water 2 metre dewpoint temperature Most unstable CAPE Convective rain rate Instantaneous 10 metre wind gust Large scale rain rate Precipitation type Sea ice area fraction Sea surface temperature Total column cloud liquid water Total column vertically-integrated water vapour Visibility Instantaneous total lightning flash density Large scale snowfall rate water equivalent	Single and Surface fields (Atmosphere)
Hourly	Mean zero-crossing wave period Mean wave direction Mean wave period Peak wave period Significant wave height of combined wind waves and swell	Single and Surface fields (Wave)
Hourly	Divergence Geopotential Specific humidity Relative humidity Temperature U component of wind V component of wind Vorticity (relative)	Pressure levels 21 pressure levels: (1, 2, 3, 5, 7, 10, 20, 30, 50, 70, 100, 150, 200, 250, 300, 400, 500, 700, 850, 925, 1000)
Hourly	Eta coordinate vertical velocity Fraction of cloud cover Specific cloud ice water content	Model levels (Atmosphere) 137 model levels (1 to 137)

	<u>Specific cloud liquid water content</u> <u>Specific humidity</u> <u>Specific rain water content</u> <u>Specific snow water content</u> <u>Temperature</u> <u>U component of wind</u> <u>V component of wind</u> <u>Vertical velocity</u>	NOT AVAILABLE EXTERNALLY – FIELDS TO BE PASSED TO on-demand-extremes-dt
Hourly	100 metre U wind component 100 metre V wind component	Height levels 100m
Mean encodings		
6 hourly mean	<u>Averaged total lightning flash density in the last 6 hours</u>	Single and Surface fields (Atmosphere)
Accumulated encodings		
Hourly	Runoff Total precipitation Accumulated freezing rain Time-integrated eastward turbulent surface stress Large-scale precipitation Time-integrated northward turbulent surface stress Snowfall Surface net short-wave (solar) radiation Surface net long-wave (thermal) radiation Surface short-wave (solar) radiation downwards Surface long-wave (thermal) radiation downwards Top net short-wave (solar) radiation Top net long-wave (thermal) radiation	Single and Surface fields (Atmosphere)

5.3 On-Demand Weather-induced and Geophysical Extremes DT

ID	DTEE-OD-02 (DEDL Harmonised Data Access service) on-demand-extremes-dt (Polytope service)
Status	Development
Description	On-Demand Digital Twin forecast for Weather-induced and Geophysical Extremes within Europe
Data family	Destination Earth - On-Demand Weather-induced and Geophysical Extremes

	Digital Twin	
Documentation	RD-2, RD-7	
Availability Policy	On-Demand regional extreme forecast data. Tagged past dates remain available throughout Phase 1 and Phase 2, by default only events within the past 15 days, subject to quality control decisions and storage requirements as production begins	
Data access	DESP website API	
Geographical area	Regional over Europe	
Geometry	Lambert conical tangent projection, up to 2000x2000x90 (x,y,z) grid points	
Vertical coordinate	Hybrid levels, numbers of levels up to 90	
Vertical coverage	From surface to 10 hPa	
Horizontal resolution	500-750m	
Time coverage	48-72 hours	
Time resolution	5 minutes to hourly	
Update frequency	On-Demand	
Dissemination	DESP web server	
Data format	GRIB2, ccstds_packing to be used where possible	
Size	1.6 GB per output step every 5 min x 72h ~1.4TB max. Output often reduced to 0.35 GB for 5 minute frequency.	
Instantaneous encodings		
15 minutes to hourly	10m U wind component 10m V wind component 2 metre temperature Surface pressure Mean sea level pressure 2m Relative Humidity 2m Specific Humidity Rain precipitation rate Precipitation type (most frequent) in the last 1 hour	Single and surface fields
